

TYPING TRAINER

This program is designed to improve the speed of your typing with Sega, giving you accurate appraisals of speed word by word, sentence by sentence with bar chart comparisons to plot your progress more clearly.

The more even the chart, the better you have become.

TO LOAD:

Connect your cassette recorder via external speaker or monitor socket, to the 'in' port, at the back of your Sega. Insert the cassette label up and ensure it is rewound to the start.

Check all connections are secure. Set the volume level to half volume, type in Load 'Type'. Enter the command by pressing CR (carriage return key).

The screen will read Loading Start: You should then press Play on the tape recorder.

After a brief pause your screen will say Found Type. If after approximately 1 minutes this does not happen, repeat the process increasing the volume slightly.

Once Sega has found the program it takes approximately 2 minutes to load. Should the Tape Read Error statement appear on screen,

you should again repeat the loading process on a slightly higher volume setting until a level which is right for your recorder is reached.

RUNNING THE PROGRAMME:

Enter in the Run command, press CR, and the programme will commence. Operating instructions are built into the programme with options of

1. Single word test
2. Sentence test

Performance is monitored per word or sentence, and graphed for overall average words per minute performance every tenth example.

The test involves a word or sentence appearing on screen, which should be copied as quickly as possible.

Pressing the space bar at the completion of the sentence immediately produces another random selection from a library of over 400 options.

Should you for any reason break out of the program, re-enter the Run command to begin again.
